- # COMP6237 Data Mining
- Notes, Slides and Demos for COMP6237 2025-26

Zhiwu's parts of the ECS [COMP6237 Data Mining](#) module will be taught through lectures and demonstrations, based on Jon Hare's and Jo Grundy's lectures and demonstrations written for the course in previous years. Their demonstrations, lecture slides, and videos are available [here](#). Please note that video recordings may not be available for all lectures. This may be due to technical issues or our intention to encourage greater in-person attendance. Additionally, some recordings may only be available for lectures from earlier years.

Module Overview

- Developed by Prof Jon Hare & Dr Jo Grundy, run for the 9th time
- Created to fill a gap
 - **Data mining is almost synonymous with machine learning**
 - Inevitably have some overlap with machine learning modules
e.g. COMP3222/COMP3223/COMP6245/COMP6208
 - Should be complementary and offer different views
 - **Slightly more applied pragmatic focus**
 - How do you work with real world data?
 - How do you solve real problems?

Module Overview

- Around 26 lectures + additional tutorials
- Wide range of data mining topics

Module Overview

- Reading material

Module Timetable

The lecture slots are as follows:

Day	Time	Room
Monday	5 PM	B100 4011 (Harvard L/TB)
Tuesday	5 PM	B06 1077 (L/T A) B46/2003
Thursday	12 PM	B46 2003 (L/T B)
Friday	3 PM	B46 2003 (L/T B)

Date	Semester Week	Lecturer(s)	Topic/Title
26-Jan	1	Zhiwu	Intro to Data Mining
29-Jan		Zhiwu	Finding Groups
30-Jan		Zhiwu	Covariance
02-Feb	2	Zhiwu	Embedding Data
03-Feb		Zhiwu	Search
06-Feb		Shoaib	Linear Regression I; Group CW set
09-Feb	3	Shoaib	Linear Regression II

Final Exam	70%

Group Coursework

- Three Q & A sessions in **Week 3&4**; by that time we want you to have formed groups at <https://secure.ecs.soton.ac.uk/student/wiki/w/COMP6237-2025-classlist>

The screenshot shows a MediaWiki page titled "COMP6237-2025-classlist". The page has a navigation sidebar on the left with links like "Main Page", "Recent changes", "Random page", and "Help". The main content area contains a table with student information.

Student Name	Student Email	Group Project Name	Group Number
Markus Brede	mb8	Lecturers	0
Zhiwu Huang	zh1r23	Lecturers	0
Shoaib Ehsan	se3e22	Lecturers	0

- Four presentation sessions before Easter (**Week 8**)
- Report submission at the end of the term (**May 15**)

Final Exam

- **Computer-aided with only MCQs**
 - Shoaib (40 marks) + Zhiwu (40 Marks) + Markus (20 Marks)
 - 3 Lectures for revisions
 - Platform: <https://moodle.ecs.soton.ac.uk>

Please read the instructions below and wait on this page until an invigilator tells you to start. Press "Start Exam" when instructed to by an invigilator.

This is a Computer Aided Assessment. Follow all instructions in the exam software.

What is Data Mining?

“Data mining is **the process of extracting and finding patterns in massive data sets** involving methods at the intersection of machine learning, statistics, and database systems.

Data mining is an interdisciplinary subfield of computer science and statistics with an overall goal of **extracting information (with intelligent methods) from a data set and transforming the information into a comprehensible structure for further use.**”

–Wikipedia

Why Do we Learn Data Mining?

- “Modern AI systems like ChatGPT are trained on massive amounts of data and can understand text, images, and tables. So why do we still need data mining?”

Why Do we Learn Data Mining?

- Please ask ChatGPT: “Hi ChatGPT, this is my company’s sale data please analyze and tell me what patterns exist.”

“ChatGPT is good at answering questions.
But someone still needs to look at the data and find the patterns.”

“Who finds those patterns?”

👉 This is where **data mining naturally appears**.

Instead, we might ask ChatGPT: “Here are the customer groups we found using data mining. Can you explain them and suggest business actions?”

The Plan for the Next 12 Weeks

.You will learn to solve real-world problems – e.g.:

- Recommender systems
- Market Basket Analysis
- Document filtering and spam detection
- Duplicate document detection
- Link prediction
- Community detection
- Ranking search results
- Social network analysis

.You will also learn various tools & techniques - e.g.:

- Linear algebra (SVD, Eigendecomposition & PCA, NNMF, etc.)
- Optimisation (e.g. stochastic gradient descent)
- Dynamic programming (frequent itemsets)
- Hashing (LSH, Sketching, Bloom Filters)
- Statistics of regression analysis
- Information theory
- Network theory

The Group Coursework

- .You need to form groups
 - Target size is 4 (**strictly**)
 - As a group, you need to choose a data mining problem to work on
 - (You'll need to train and evaluate models and compare their performance [possibly against approaches from others])
- . Come along to the slots in week 3 to discuss your ideas for problems to work on with us
- .Enter your team name and team members on the student wiki:

<https://secure.ecs.soton.ac.uk/student/wiki/w/COMP6237-2025-classlist>

Key Date

- Each team needs to submit a 1-page project brief by the end of week 4 (**20th of Feb**).
- Before Easter groups must present their idea and approaches to the class.
 - ❖ Teams should be prepared to present in the first slot; to ensure fairness we will pick teams at random
- Teams must submit a conference paper by **4pm on May 15**.
